

Purchase orders for Materials & Services being covered by NATO requirements

AQ Trafotek is partly buying materials and/or services which are relevant for our products that are covered by quality rules based on the NATO standard AQAP-2110. Besides the well-known, typical quality assurance topics (e. g. annual quality audits) this can also include unlikely, but possible specific factory inspections that are not only handled by AQ Trafotek but also from AQ Trafotek's customer's representative. This so called "Government Quality Assurance Representative" (GQAR) will have the right to act with AQ Trafotek's supplier in a similar way like AQ Trafotek itself.

AQ Trafotek will inform this specific matter to his suppliers when placing purchase orders that are relevant for the NATO quality standards. By accepting the purchase order, the supplier is then at the same time also accepting the GQAR as representative of AQ Trafotek and granting the permission for the GQAR to enter the supplier's facility and inspect all matters that are related to the order which has been placed by AQ Trafotek.
